ARCUS

Fundraising, Investor Relations and Mandate Origination System

Developer Software Requirements Document

For Asset Managers, Private Equity Funds and Venture Capital Funds

Version 1.0 | July 2026

Institutional-grade fundraising CRM, mandate pipeline, investor onboarding, due diligence, commitments and analytics.

Document Control

Field	Requirement
Document name	Arcus Fundraising, Investor Relations and Mandate Origination System - SRD
Document type	Developer Software Requirements Document
Primary users	Asset managers, PE funds, VC funds, investor relations, legal, compliance, finance and business development teams
Version	1.0
Status	Approved functional specification for design and development
Design direction	Modern institutional interface optimised for 13.5-inch laptop screens; dark navy Arcus theme with compact high-density tables and clear workflow states

Document Contents

- 1-5: Purpose, operating models, objectives and navigation
- 6-12: Core records, opportunity values, roles, campaigns and stage gates
- 13-20: Communications, RFPs, due diligence, data rooms, compliance and agreements
- 21-28: Commitments, mandates, closings, calculations, forecasts and UI requirements
- 29-36: Data model, APIs, integrations, security, guardrails, non-functional requirements and acceptance criteria
- UI Inspiration Appendix: Eight high-fidelity Arcus screens

> **Development principle**
>
> The system must distinguish commercial interest, signed commitments, admitted commitments, funded capital, awarded mandates and activated AUM. These states are not interchangeable and must remain separate in the data model, reporting and user interface.

1. Purpose

Developers must build the Arcus Fundraising, Investor Relations and Mandate Origination System as an institutional platform for sourcing investors, managing fundraising campaigns, originating asset-management mandates, conducting investor due diligence, negotiating commercial terms, completing subscription or mandate documentation and converting successful opportunities into active investor or client relationships.

The system must support asset managers raising assets under management, PE funds raising limited-partner commitments and VC funds raising commitments for closed-ended funds, co-investments and special-purpose vehicles. It must not operate as a generic contact-management tool. Every opportunity must be linked to a defined product, fund, mandate or campaign and must progress through controlled commercial, legal, compliance and onboarding stages.

2. Plain-English Explanation for Developers

Investment firms require a controlled way to identify prospective investors or clients, manage the relationship, qualify the opportunity, share materials, complete due diligence, negotiate terms, secure signatures, receive capital or assets and activate the relationship in the relevant operating module.

- Which funds, products or mandates are currently being marketed?
- Who is being approached, who owns the relationship and what is the next action?
- Is the amount only indicative, soft-circled, signed, admitted, funded, awarded or activated?
- What due-diligence, legal and compliance items remain outstanding?
- What commercial concessions, side-letter terms or fee discounts have been offered?
- Has the investor or client signed, funded and completed onboarding?
- What AUM, commitment value and recurring fee revenue are expected from the pipeline?

3. Supported Operating Models

3.1 Asset-Management Mandate Origination

Asset managers may originate institutional mandates, managed accounts, collective investment products, unit trusts, pension-fund mandates, insurance mandates, corporate treasury portfolios, distributor relationships and advisory mandates.

Area	Required treatment
Opportunity value	Expected initial AUM and potential future AUM
Commercial basis	Management fee basis points, performance fee, fee floors/caps, minimum mandate size and term
Investment setup	Asset class, benchmark, restrictions, custody, reporting frequency and transition plan
Activation event	Agreement signed, KYC approved, portfolio configured and assets or cash received

Mandate lifecycle

```
Proposal Accepted -> Agreement Signed -> Client Onboarded -> Assets Transferred -> Mandate Activated
```

3.2 Private Equity Fundraising

PE fundraising must support blind-pool funds, growth-equity funds, buyout funds, infrastructure funds, real-estate funds, private-credit funds, continuation vehicles, co-investment vehicles and SPVs.

- Target fund size, minimum size, first-close target and hard cap
- Soft-circle, proposed, signed, admitted and funded amounts
- Side letters, MFN rights, advisory committee rights, excuse rights and fee discounts
- Investor jurisdiction, fund domicile, eligibility and compliance status

3.3 Venture Capital Fundraising

VC fundraising must support seed, early-stage, growth-stage, impact, technology, climate, corporate venture, angel syndicate and opportunity-fund structures. It must handle smaller ticket sizes and higher-volume engagement without weakening legal and compliance controls.

4. Product Objectives

1. Create and manage fundraising campaigns for funds, products and mandates.
2. Maintain one central investor and institutional-client database with multiple contacts per organisation.
3. Provide configurable pipelines and stage-gate controls for asset management, PE and VC.
4. Track indications, proposals, soft circles, commitments, funded capital, expected AUM and activated AUM separately.
5. Record all calls, meetings, messages, notes, documents, approvals and next actions.
6. Manage DDQs, RFPs, tenders, data rooms, KYC, sanctions screening and investor eligibility.
7. Generate agreements, route approvals, obtain electronic signatures and create closing or mandate records.
8. Calculate pipeline value, expected AUM, fee revenue, conversion, stage ageing and fundraising progress.
9. Maintain complete object-level security and an immutable audit trail.

5. Application Navigation

```
Fundraising & Investor Relations
|-- Dashboard
|-- Campaigns
|-- Investor Organisations
|-- Contacts
|-- Opportunities / Pipeline
|-- Mandates & RFPs
|-- Due Diligence
|-- Data Rooms
|-- Communications
|-- Meetings & Tasks
|-- Documents
|-- Agreements & Signatures
|-- Commitments & Closings
|-- Client Onboarding
|-- Placement Agents
|-- Forecasts & Analytics
|-- Reports
|-- Approvals
|-- Audit Logs
`-- Settings
```

> **Adaptive terminology**
>
> Asset-management users must see mandate, product, AUM and fee terminology. PE and VC users must see fund, LP, commitment, closing and capital terminology. The underlying services may be shared, but labels, forms and workflow gates must be context-aware.

6. Core Domain Concepts

6.1 Investor Organisation

An investor organisation is the legal or commercial entity being approached, such as a pension fund, insurer, DFI, family office, sovereign fund, corporate treasury, bank, fund of funds or consultant.

Field group	Required fields
Identity	Legal name, trading name, investor type, registration number, country and jurisdiction
Commercial profile	Estimated AUM, typical ticket range, asset-class preferences and geographic interests
Relationship	Relationship owner, source, current status, last interaction and next action
Compliance	KYC status, sanctions status, risk rating, investor classification and eligibility

6.2 Contacts

Each investor organisation may have multiple contacts. Contacts must be reusable across campaigns rather than duplicated. Required details include role, department, email, telephone, decision-making influence, communication consent, last interaction and next planned action.

6.3 Fundraising Campaign

A campaign is the structured fundraising or mandate-origination effort linked to a fund, product, SPV or mandate strategy.

Field	Requirement
Campaign type	PE fundraise, VC fundraise, co-investment, SPV, continuation vehicle, product launch, institutional mandate or distributor campaign
Targets	Target amount/AUM, minimum target, hard cap, first-close target and final-close date
Configuration	Base currency, investor segments, pipeline stages, stage probabilities and owners
Control	Status, approval status, permitted documents, access roles and marketing jurisdiction rules

6.4 Opportunity

```
Investor Organisation + Campaign + Fund/Product/Mandate + Relationship Owner = Opportunity
```

Each opportunity must store the current stage, indicative amount, currency, base-currency equivalent, confidence, expected close date, decision process, consultant, placement agent, owner, source, priority, probability and lost reason where applicable.

7. Opportunity Amount Types

Amount type	Definition
Indicative interest	Early non-binding estimate
Qualified amount	Amount confirmed during meaningful engagement
Soft circle	Expected but non-binding commitment
Proposed amount	Amount included in draft documentation
Signed commitment	Amount in an executed agreement
Admitted commitment	Amount formally admitted at a fund close
Funded amount	Cash or assets actually received
Expected AUM	Assets expected under a mandate opportunity

Amount type	Definition
Activated AUM	Assets actually transferred and placed under management

> **Mandatory history**
> Every amount change must create a dated history record. Users must never overwrite the previous amount without preserving the former value, reason and author.

8. User Roles and Permissions

Role	Core permissions
Head of Fundraising / Business Development	Create campaigns, assign opportunities, approve communications, monitor forecasts and approve stage overrides.
Investor Relations Officer	Manage investors, opportunities, communications, meetings, data-room invitations, DDQs and agreements.
Asset-Management Business Development Officer	Manage mandate opportunities, RFP submissions, expected AUM, fees, consultants and onboarding.
Managing Partner / General Partner	Approve commercial terms, fee discounts, side letters, admissions and closing events.
Compliance Officer	Review KYC/AML, sanctions, eligibility, risk rating and compliance holds.
Legal Officer	Manage agreement templates, versions, approvals, side letters and electronic signatures.
Finance / Fund Accountant	Review commitments, receipts, funded amounts, fee terms and accounting integration.
Placement Agent	Restricted access to assigned campaigns, prospects and commission-eligible opportunities.
Prospective Investor / Client	Secure portal access to profile forms, KYC, DDQs, data room, questions and signatures.

9. Campaign Setup Workflow

1	2	3	4	5	6	7	8
Create campaign	Select type and linked product	Set targets and dates	Configure investor segments	Configure pipeline and gates	Assign team and documents	Submit for approval	Activate campaign

A campaign cannot become active until the linked product exists, targets are approved, required marketing materials are present, pipeline stages are configured, permissions are assigned and compliance has approved marketing where required.

10. Configurable Pipeline Models

10.1 PE and VC Fundraising Pipeline

1	2	3	4	5	6	7	8	9	10	11	12	13
Target Investor	Contacted	Qualified	Engaged	Data Room	Due Diligence	IC / Trustee Review	Commercial Negotiation	Subscription Docs	KYC / Compliance	Signed	Admitted	Funded

10.2 Asset-Management Mandate Pipeline

1	2	3	4	5	6	7	8	9	10	11	12	13
Target Client	Initial Contact	Discovery	Qualified	RFI / RFP	Proposal	Due Diligence	Presentation	Preferred Bidder	Negotiation	Awarded	Assets in Transition	Activated

Alternative terminal or temporary statuses must include On Hold, Deferred, Lost, Withdrawn, Disqualified, Tender Cancelled and Not Eligible.

11. Stage-Gate Controls

Every stage movement must execute server-side validation. Drag-and-drop on a Kanban board is only a user interface action; it must not bypass mandatory checks.

Transition	Required gate
Move to Due Diligence	Confirmed interest, indicative amount, investor classification, decision maker, confidentiality agreement and approved data-room access
Move to Subscription Documents	Proposed commitment, approved commercial terms, legal entity details, eligibility confirmation and signatory details
Move to Signed Commitment	Executed agreement, final amount, side letter complete, KYC not blocked and signature integrity verified
Move to Mandate Activated	Agreement signed, KYC approved, custodian confirmed, portfolio configured, reporting set up and assets received

Validation response

Where a transition fails, the opportunity must remain in its current stage and the API must return each unmet requirement so the interface can show a clear remediation checklist.

12. Investor and Client Relationship Management

The investor 360-degree record must show organisation profile, contact hierarchy, active and past opportunities, commitments, current AUM, KYC status, data-room access, agreements, side letters, communication history, open tasks, preferences and internal relationship notes.

One investor organisation may participate in multiple funds or products. The organisation record must remain singular while opportunities, commitments and mandates remain separate child records.

13. Communications and Interaction Logging

- Email
- Telephone call

- Physical or video meeting
- Conference interaction
- Presentation
- Data-room invitation
- Proposal submission
- DDQ response
- Follow-up
- Internal note
- Approved messaging interaction

Each interaction must record the opportunity, investor, contact, type, subject, date/time, participants, owner, summary, outcome, sentiment, next action, next-action date, attachments and confidentiality level.

> **Secure document delivery**
>
> Sensitive fund or mandate documents must be sent through authenticated secure links. Ordinary email attachments must not be used for confidential legal, fund or investor documents.

14. Meetings, Tasks and Activity Management

Users must be able to schedule meetings, assign actions, record minutes, link tasks to opportunities or campaigns, create recurring follow-ups, synchronise approved meetings to calendars and escalate overdue actions.

Task statuses

```
NOT_STARTED | IN_PROGRESS | WAITING_ON_INVESTOR | WAITING_ON_INTERNAL_TEAM | COMPLETED | CANCELLED | OVERDUE
```

15. RFP and Proposal Management

Asset managers must manage institutional RFIs, RFPs and tenders through a controlled checklist and approval workflow.

Field	Requirement
Tender details	Reference, issuing institution, deadlines, presentation date and evaluation criteria
Submission control	Mandatory documents, question deadlines, owners, proposal versions, approvals and submission evidence
Commercial content	Strategy, AUM, fees, benchmark, limits, team, track record, risk, reporting and implementation plan
Outcome	Award status, debrief notes, loss reason, next action and conversion to mandate onboarding

16. Due-Diligence Management

The system must support investor, manager, operational, legal, compliance, financial, ESG, technology and investment-process due diligence.

16.1 DDQ Management

- DDQ templates and categories
- Assigned response owners
- Reusable approved responses
- Response versioning and evidence
- Reviewer comments and approvals
- Investor-specific questions
- Submission history and response expiry dates

DDQ statuses
`NOT_STARTED | IN_PROGRESS | INTERNAL_REVIEW | APPROVED | SUBMITTED | INVESTOR_FOLLOW_UP | COMPLETED`

17. Data-Room Management

The data room must provide investor-specific invitations, folder/document permissions, expiry dates, watermarking, view-only access, download restrictions, activity logs, confidentiality acknowledgement and access revocation.

Area	Requirement
Typical folders	Fund overview, strategy, track record, team, legal, financials, valuation, risk, compliance, ESG, portfolio, service providers, tax and subscription documents
Access controls	Investor-specific access, folder-level and document-level permissions, time-limited invitation and MFA where required
Monitoring	Views, downloads, failed access, high-value activity and document version access

18. KYC, AML and Investor Eligibility

Onboarding must capture legal entity verification, beneficial ownership, identity and registration documents, tax details, source of funds/wealth, sanctions, PEP, adverse media, investor classification, jurisdiction, authorised signatories and verified bank accounts.

KYC statuses
`NOT_STARTED | DOCUMENTS_REQUESTED | DOCUMENTS_RECEIVED | UNDER_REVIEW | ADDITIONAL_INFORMATION_REQUIRED | APPROVED | APPROVED_WITH_CONDITIONS | REJECTED | EXPIRED`

Compliance gate

Commercial engagement may continue while KYC is in progress, but no investor may be admitted, funded or activated while a mandatory compliance block exists.

19. Commercial Terms, Fees and Side Letters

19.1 PE and VC Terms

Record commitment amount, management fee, carried interest, hurdle, preferred return, GP commitment, advisory committee rights, co-investment rights, reporting rights, fee discounts, equalisation, excuse/exclusion rights, MFN rights, key-person terms and transfer restrictions.

19.2 Asset-Management Terms

Record expected AUM, initial funding, management fee basis points, performance fee, hurdle, benchmark, fee floors/caps, minimum mandate size, term, notice period, reporting frequency and custody arrangement.

Concessions outside configured thresholds must create an approval request. Examples include fee discounts, non-standard liquidity, custom reporting, unusual liability clauses and exclusivity arrangements.

20. Agreements and Electronic Signatures

Area	Requirements
PE / VC documents	NDA, term sheet, subscription agreement, LPA, side letter, co-investment agreement, adherence agreement and investor representation letter

Area	Requirements
Asset-management documents	NDA, proposal acceptance, investment-management agreement, mandate, service-level agreement, fee schedule, guidelines and custody instructions
Signature control	Document version, required signatories, sequence, invitation date, expiry, signed date, signed file, certificate and document checksum

A signature must be tied to a specific document version. Uploading a superseding version must invalidate outstanding signature requests and require a new approval/signature cycle.

21. Commitment Management for PE and VC Funds

Commitment statuses

```
INDICATIVE | SOFT_CIRCLED | PROPOSED | DOCUMENTS_ISSUED | SIGNED | ACCEPTED | ADMITTED_AT_CLOSE |
PARTIALLY_FUNDED | FUNDED | REDUCED | CANCELLED | DEFAULTED
```

A commitment record must contain the investor, fund, opportunity, currency, amount, signed date, admission date, closing event, funded amount, unfunded amount, side-letter reference, capital-call contact, distribution instructions, compliance status and accounting status.

> **Accounting treatment**
>
> A signed commitment must not be reported as cash received. Commitment, admission and funding are separate states and must reconcile independently.

22. Asset-Management Mandate Activation

An awarded mandate must remain in onboarding until the agreement is signed, KYC approved, investment guidelines and benchmark configured, fees and reporting configured, custody confirmed, opening balances validated and assets/cash received.

Mandate statuses

```
AWARDED | ONBOARDING | ASSETS_IN_TRANSITION | PARTIALLY_FUNDED | ACTIVE | SUSPENDED | TERMINATED |
LOST_BEFORE_ACTIVATION
```

23. Fund Closing Management

PE and VC funds may have first, interim, subsequent, extended and final closes. Each close must record the date, investors admitted, commitments, total admitted amount, compliance and legal confirmations, equalisation requirements, documents, approvals and closing pack.

Gate	Requirement
Legal readiness	Subscription agreements and side letters signed; tax and eligibility documents complete
Compliance readiness	KYC approved, bank details verified and no compliance hold
Fund readiness	Minimum close conditions met and admission approvals completed
Post-close	LP relationship, portal access, capital-call contact and reporting preferences created

24. Placement Agent Management

Track placement-agent appointment period, geography, investor exclusions, fee percentage, retainer, success fee, introduced opportunities, protected period, commission status and supporting agreement. Fees may only be calculated for opportunities eligible under the appointment.

25. Pipeline Calculations

25.1 Base-Currency Opportunity Value

```
Base Value = Transaction-Currency Opportunity Amount x Approved FX Rate
```

25.2 Gross and Weighted Pipeline

```
Gross Pipeline Value = Sum of open qualified opportunity base values

Weighted Pipeline Value = Sum(Base Value x Stage Probability x Confidence Adjustment)
```

25.3 Progress and Coverage

```
Commitment Progress = Signed or Admitted Commitments / Fundraising Target x 100
AUM Progress = Activated AUM / AUM Target x 100
Coverage Ratio = Weighted Open Pipeline / Remaining Target
```

25.4 Expected Fee Revenue

```
Expected Annual Fee = Expected AUM x Fee Basis Points / 10,000 x Probability
```

25.5 Conversion and Ageing

```
Stage Conversion Rate = Opportunities Entering Next Stage / Opportunities Entering Current Stage x
100
Average Days in Stage = Total Days Spent in Stage / Number of Opportunities
```

26. Forecasts and Scenarios

The forecasting workspace must show target, signed/activated amount, gross pipeline, weighted pipeline, remaining target, coverage ratio, expected monthly and quarterly closes, expected AUM, expected fee revenue, concentration and downside/base/upside scenarios.

> **Scenario isolation**
>
> Forecast scenarios must store assumptions separately and must never alter live opportunity records, probabilities or amount histories.

27. Dashboard and User Interface Requirements

The interface must use a modern Arcus institutional design language optimised for a 13.5-inch laptop screen. The layout must avoid oversized spacing, preserve readable type at 100% zoom and keep the primary workflow visible without horizontal scrolling wherever possible.

UI area	Requirement
Layout	Fixed left navigation, compact top search/actions, dense but readable cards, table/Kanban workspaces and optional right detail drawer
Visual system	Dark navy base, blue/purple active states, green success, amber warning, red exceptions and consistent status chips
Tables	Sticky headers, sortable columns, filters, saved views, pagination, bulk actions and detail drawer
Kanban	Stage totals, card ageing, ticket value, owner, next action, due date and server-validated drag-and-drop
Responsiveness	Minimum reference viewport 1536 x 1024; maintain usability at 13.5-inch screens and 125% OS scaling

28. Required Screens

- Executive fundraising dashboard
- Pipeline Kanban board
- Investor directory and 360-degree profile
- Campaigns and communications hub
- Due-diligence workspace
- Data-room access and activity
- Commitments and closings
- Asset-management mandates and RFPs
- Forecast and analytics
- Opportunity detail workspace
- Commercial terms and approvals
- Agreements and signatures
- KYC and compliance case
- Placement-agent workspace
- Reports and audit logs

29. Database Design

29.1 Core Tables

```

);
```

30. API Requirements

30.1 Campaign and Investor APIs

```
POST /api/v1/fundraising/campaigns
GET  /api/v1/fundraising/campaigns
GET  /api/v1/fundraising/campaigns/{campaign_id}
PATCH /api/v1/fundraising/campaigns/{campaign_id}
POST /api/v1/fundraising/campaigns/{campaign_id}/activate
GET  /api/v1/fundraising/campaigns/{campaign_id}/dashboard

POST /api/v1/investors
GET  /api/v1/investors
GET  /api/v1/investors/{investor_id}
PATCH /api/v1/investors/{investor_id}
POST /api/v1/investors/{investor_id}/contacts
GET  /api/v1/investors/{investor_id}/relationship-summary
```

30.2 Opportunity and Pipeline APIs

```
POST /api/v1/fundraising/opportunities
GET  /api/v1/fundraising/opportunities
GET  /api/v1/fundraising/opportunities/{opportunity_id}
PATCH /api/v1/fundraising/opportunities/{opportunity_id}
POST /api/v1/fundraising/opportunities/{opportunity_id}/transition
POST /api/v1/fundraising/opportunities/{opportunity_id}/assign
POST /api/v1/fundraising/opportunities/{opportunity_id}/mark-lost
GET  /api/v1/fundraising/opportunities/{opportunity_id}/timeline
```

30.3 Communications, DDQ and Data-Room APIs

```
POST /api/v1/fundraising/interactions
POST /api/v1/fundraising/communications/email
POST /api/v1/fundraising/communications/bulk-email
POST /api/v1/fundraising/meetings
POST /api/v1/fundraising/tasks
POST /api/v1/fundraising/ddqs
POST /api/v1/fundraising/ddqs/{ddq_id}/submit
POST /api/v1/fundraising/data-rooms
POST /api/v1/fundraising/data-rooms/{room_id}/invite
POST /api/v1/fundraising/data-rooms/{room_id}/revoke
GET  /api/v1/fundraising/data-rooms/{room_id}/activity
```

30.4 Commitments and Mandates APIs

```
POST /api/v1/fundraising/commitments
PATCH /api/v1/fundraising/commitments/{commitment_id}
POST /api/v1/fundraising/commitments/{commitment_id}/admit
POST /api/v1/fundraising/closing-events
POST /api/v1/fundraising/mandates
POST /api/v1/fundraising/mandates/{mandate_id}/activate
GET  /api/v1/fundraising/mandates/{mandate_id}/readiness
```

31. Cross-Module Integrations

Integration	Required behaviour
Fund setup	Pull fund name, strategy, domicile, currency, target, hard cap, term, fees, providers and close dates.
LP management	Create LP-fund relationship, commitment, portal access, side-letter obligations, contacts and reporting preferences after admission.
Portfolio / mandate management	Create client portfolio, benchmark, restrictions, reporting schedules, fee terms and opening AUM after activation.
Compliance	Exchange KYC status, sanctions results, classification, signatories, bank verification, expiry alerts and holds.
Accounting	Do not post cash for signed commitments; post receipts when funds are received and activate fee accrual only under approved policy.
Cash and reconciliation	Match capital or asset receipts, update funded commitments and activated AUM, and create exceptions for differences.
Investor portal	Provision access only after identity, confidentiality and access approval requirements are satisfied.

32. Security Requirements

- Role, campaign, fund, product, investor and opportunity-level access control
- Placement-agent restrictions and row-level security
- Object-level authorisation on every API request
- MFA for sensitive actions and secure signed links
- Encrypted document storage and short-lived download URLs
- Data-room access logging and confidential-note restrictions
- Immutable audit logs with IP and session/device details
- Generic 403/404 responses that do not reveal restricted object existence

33. Developer Guardrails

Guardrail	Required implementation
Do not treat every signed document as won	Only configured legal/commercial events may create a signed commitment, mandate award or activation.
Do not treat commitments as cash	Signed Commitment is not Cash Received.
Do not treat awarded mandates as active AUM	Expected AUM is not Activated AUM.
Do not allow unvalidated drag-and-drop	Every pipeline movement must call server-side transition validation.
Do not duplicate investors	One organisation may have multiple opportunities and commitments.
Do not expose internal notes	Internal probability, negotiation and relationship notes must not appear in external portals.
Do not overwrite historical amounts	Every amount or stage change must create a history record.

34. Non-Functional Requirements

Requirement	Target
Performance	Dashboards within 3 seconds; pipeline actions within 2 seconds; investor search within 2 seconds under normal load.
Scale	Thousands of investor organisations, multiple contacts, campaigns, opportunities, currencies and multi-year activity histories.
Reliability	Idempotent imports/events, background retry, no duplicate signatures or commitment/mandate activation.
Auditability	User, role, timestamp, old/new values, source IP, session/device, reason and related objects.
Retention	Configurable by fund, jurisdiction, document type, investor status and regulatory policy.

35. Acceptance Criteria

10. Users can create asset-management, PE and VC campaigns with different pipeline configurations.
11. One investor organisation can have multiple contacts, opportunities, commitments and mandates without duplication.
12. Indicative, soft-circle, proposed, signed, admitted, funded, expected-AUM and activated-AUM values are separate.
13. Stage transitions enforce configured gates and return clear validation errors.
14. Kanban, table, investor 360, campaign, due-diligence, commitments, mandate and analytics screens are available.
15. Complete stage and amount histories are retained.
16. Users can manage communications, meetings, tasks, RFPs, DDQs and secure data rooms.
17. KYC and sanctions states can block admission, funding or activation.
18. Commercial concessions and side letters follow approval workflows.
19. Agreements are version-controlled and signatures are tied to specific versions.
20. Signed commitments create commitment records without creating false cash balances.
21. Fund closings can admit several investors and generate closing records.
22. Mandates remain in onboarding until assets are received and configurations are complete.
23. Weighted pipeline calculations use approved FX rates and clearly display assumptions.
24. Dashboards distinguish gross, weighted, signed, admitted, funded, awarded and activated values.
25. Placement agents and external users see only explicitly assigned records.
26. Every material action is recorded in the audit log.

36. Final Product Definition

The completed Arcus Fundraising, Investor Relations and Mandate Origination System must operate as a complete institutional capital-raising and client-origination platform.

For asset managers, it must support mandate sourcing, product distribution, RFPs, consultant relationships, proposals, fee negotiations, onboarding, asset transition and AUM activation. For PE and VC funds, it must support fundraising campaigns, LP relationship management, soft circles, due diligence, data rooms, subscriptions, side letters, commitments, fund closings and investor onboarding.

The system must provide a shared investor relationship database while preserving the different commercial, legal, compliance, reporting and accounting treatment required by asset-management mandates and closed-ended fund commitments.

UI Inspiration Appendix

The following screens are high-fidelity design references for the Arcus module. Developers should reproduce the information hierarchy, data density, responsive behaviour, status language and workflow patterns while using reusable Arcus components and real application data.

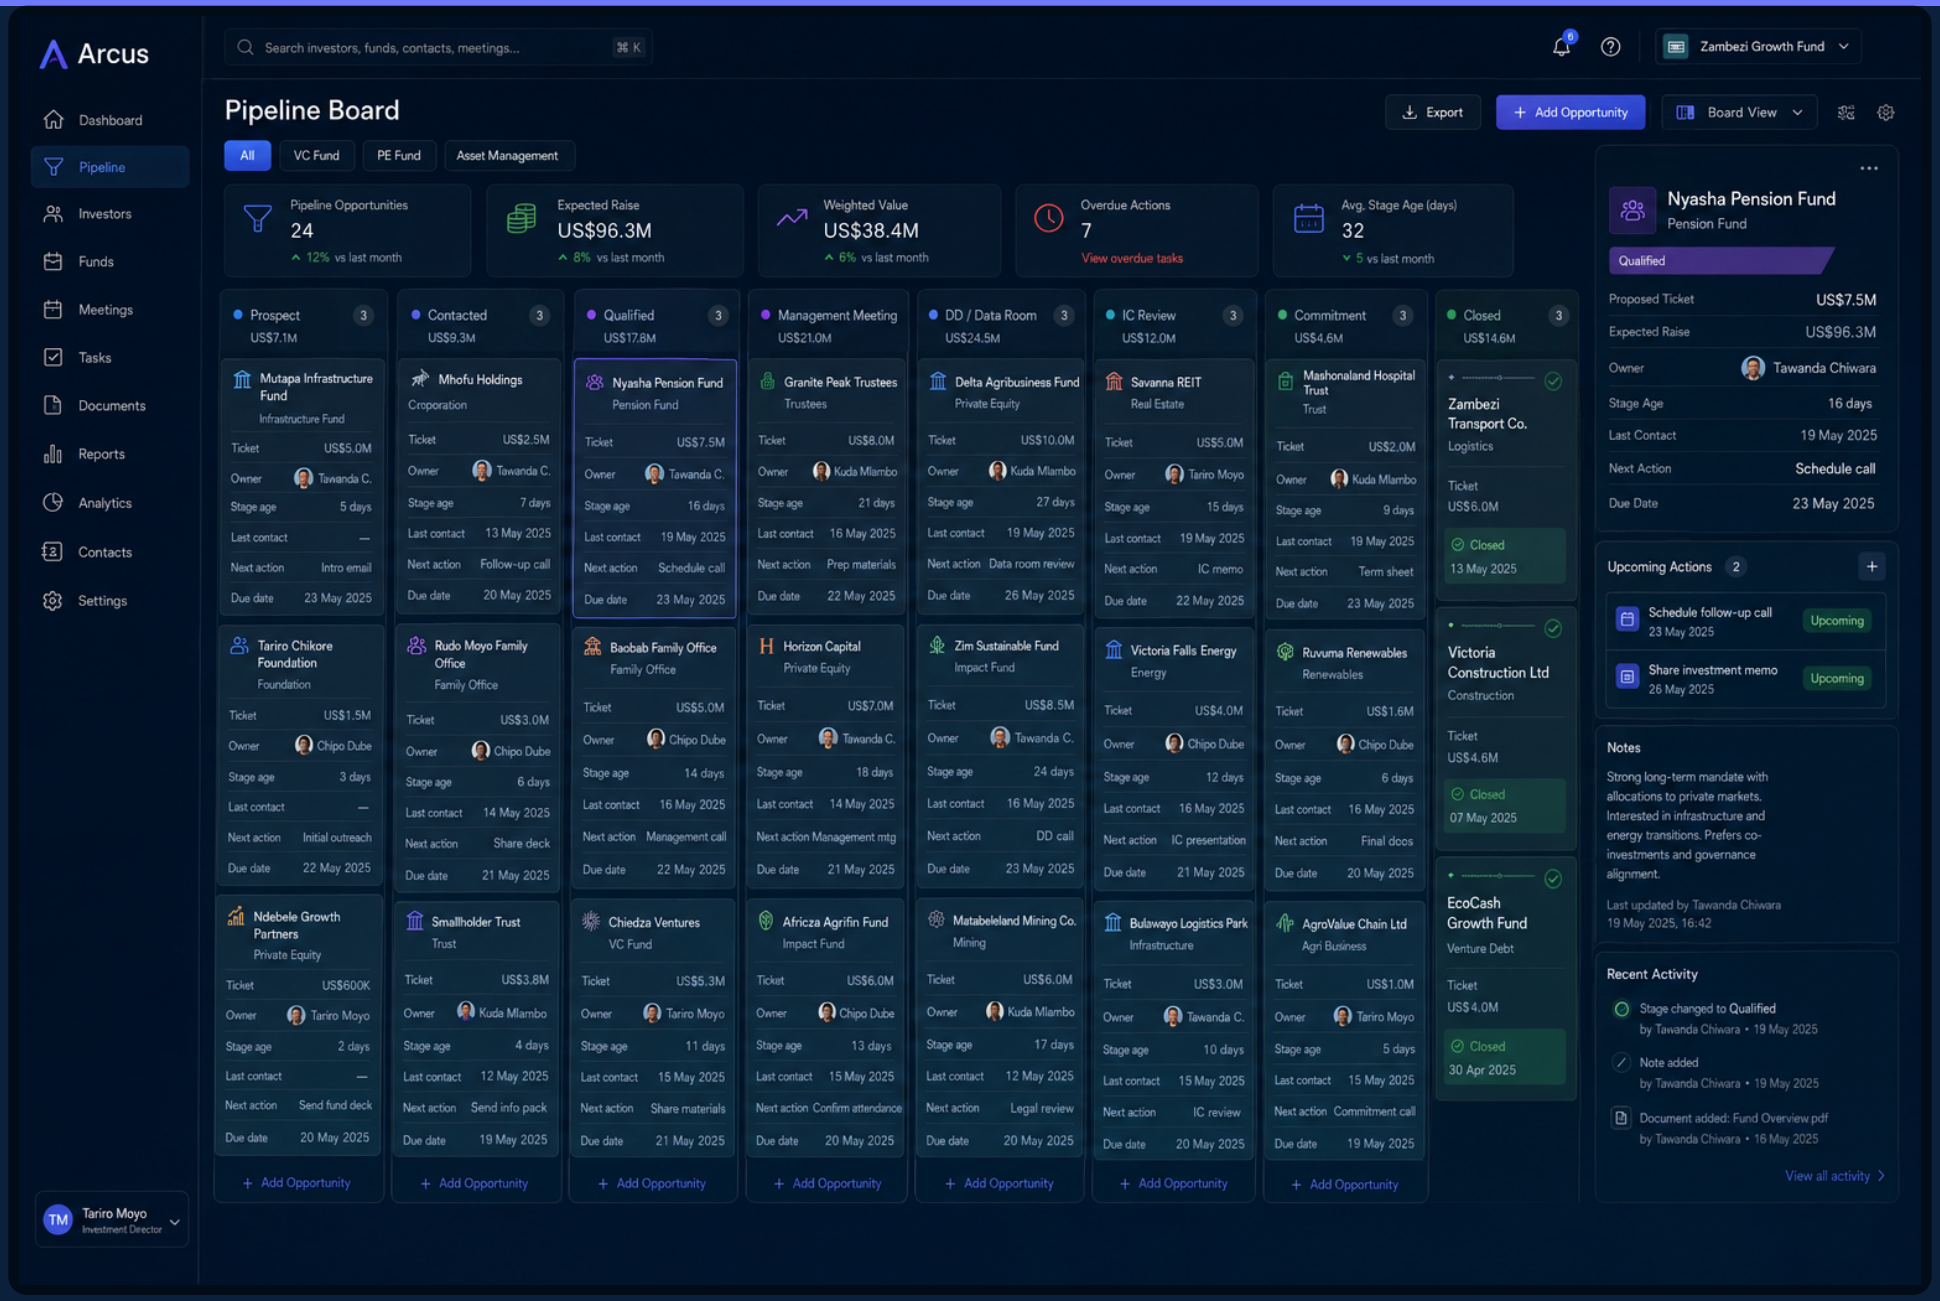

A.1 Executive Fundraising Dashboard

Fundraising overview with target, pipeline, capital raised, investor opportunities, tasks and activity.

Primary management dashboard for fundraising leadership.

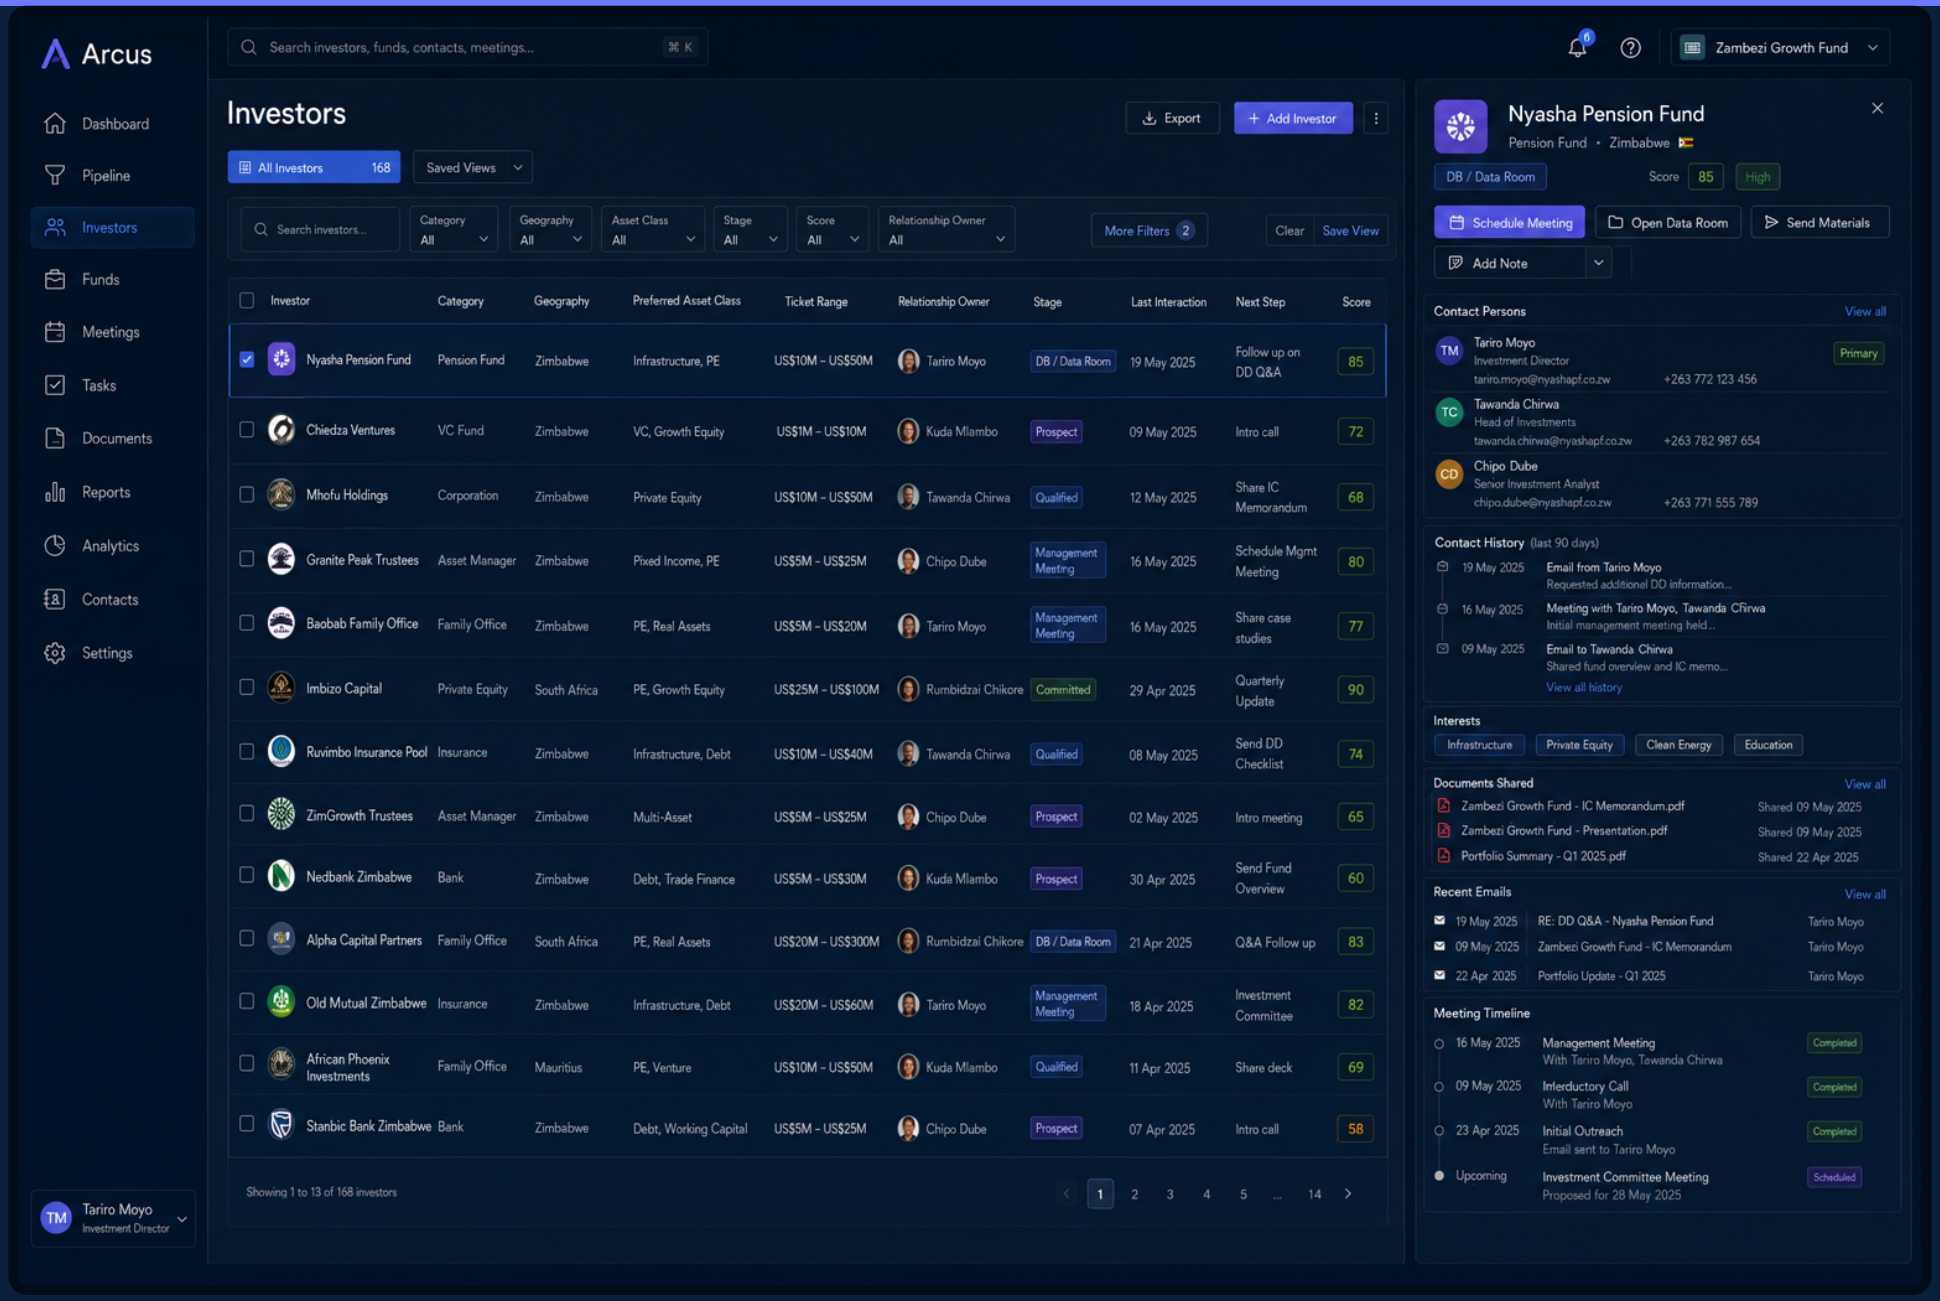

A.2 Pipeline Kanban Board

Full-stage opportunity board with stage totals, ticket values, owners, ageing and opportunity detail.

Required Kanban workspace; drag-and-drop must trigger server-side stage validation.

A.3 Investor Directory and 360-Degree View

Investor directory with filtering, scoring, opportunity stage and a detailed organisation drawer.

Central investor relationship record and interaction history.

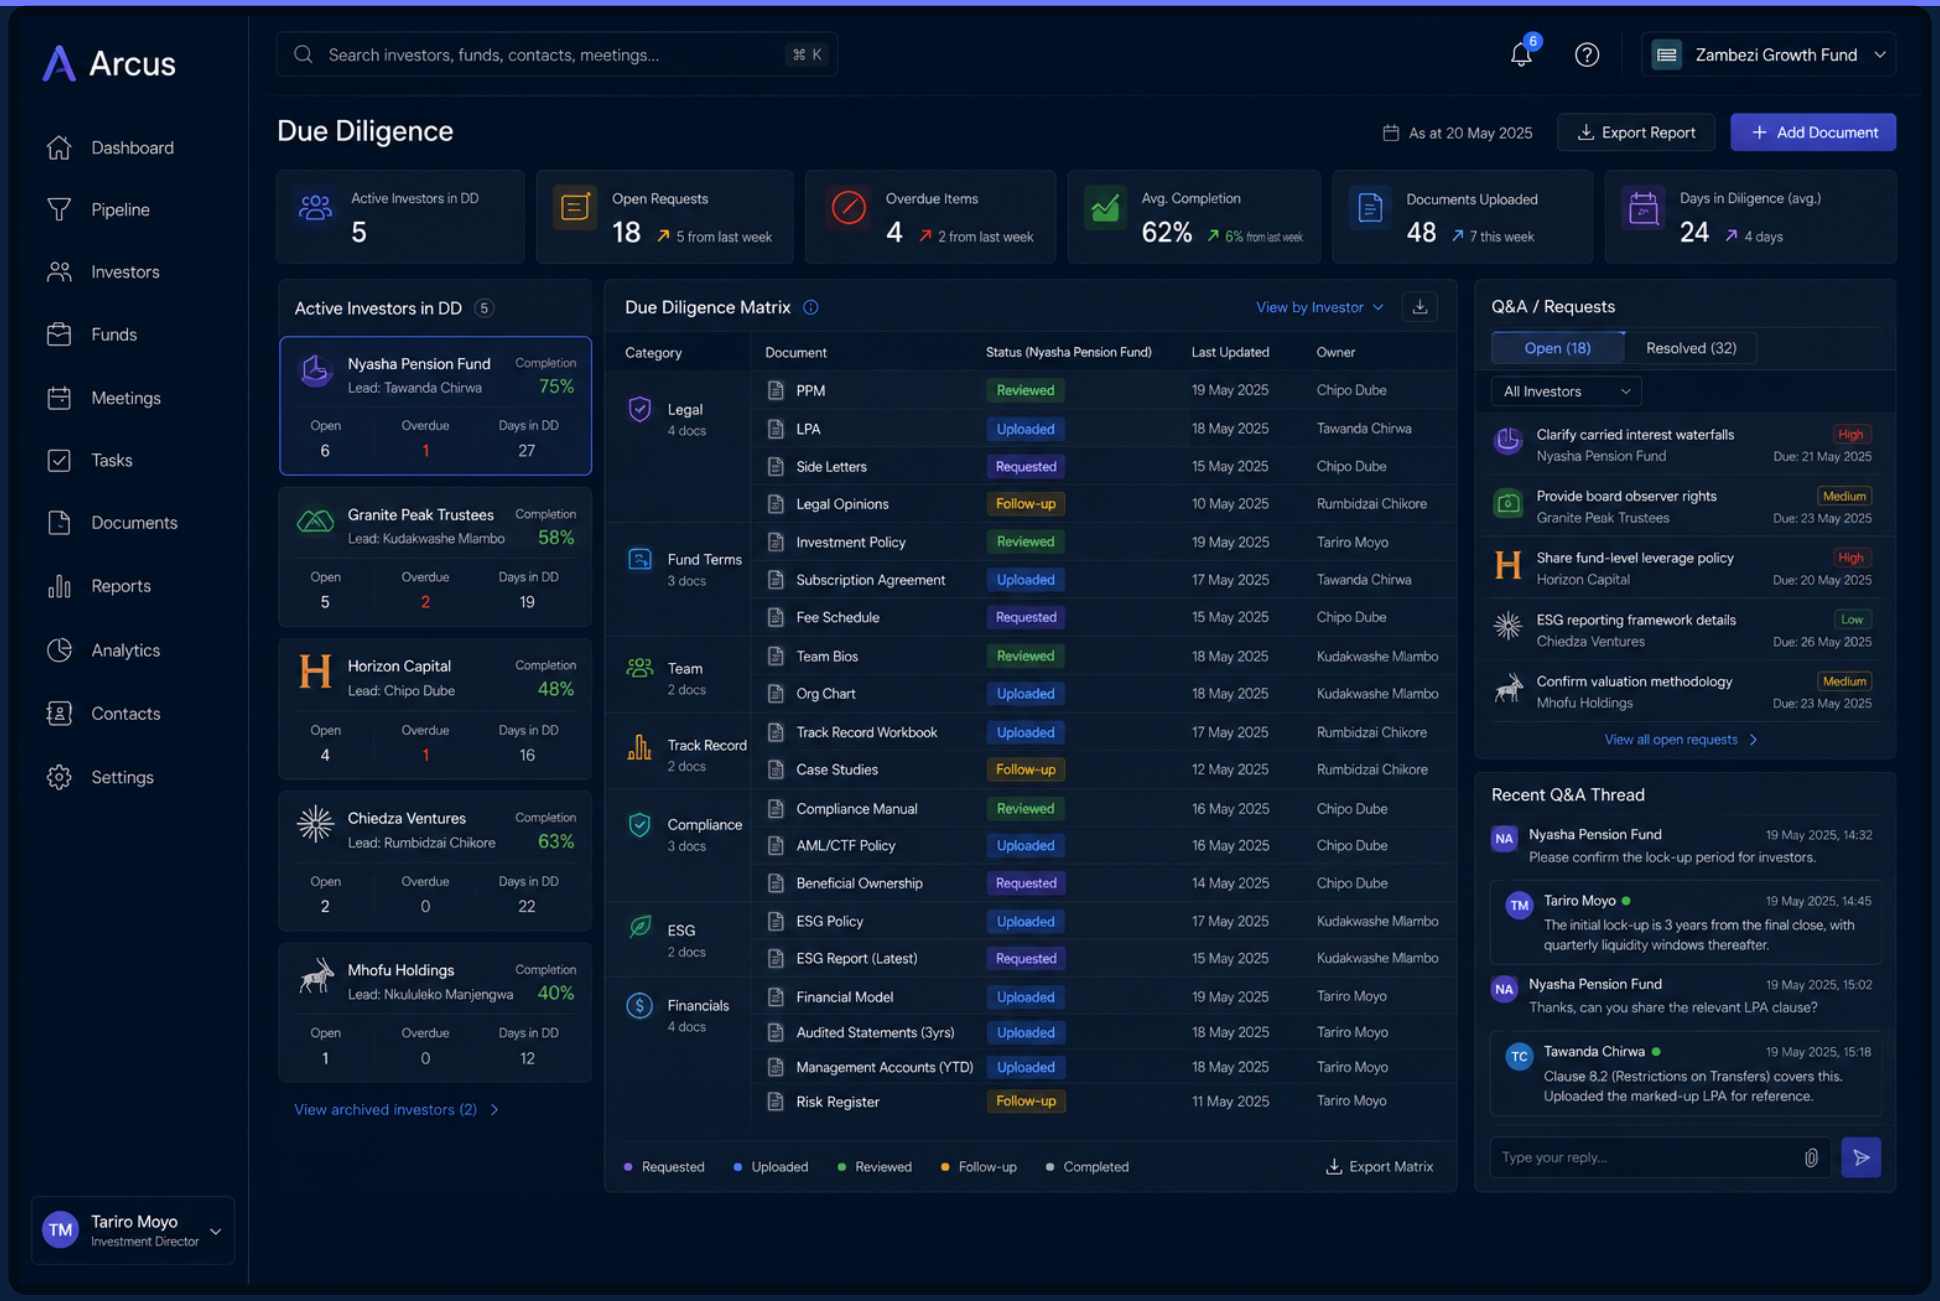

A.4 Campaigns and Communications Hub

Campaign performance, communication timeline, templates, distribution lists, events and materials.

Controlled outreach and relationship activity management.

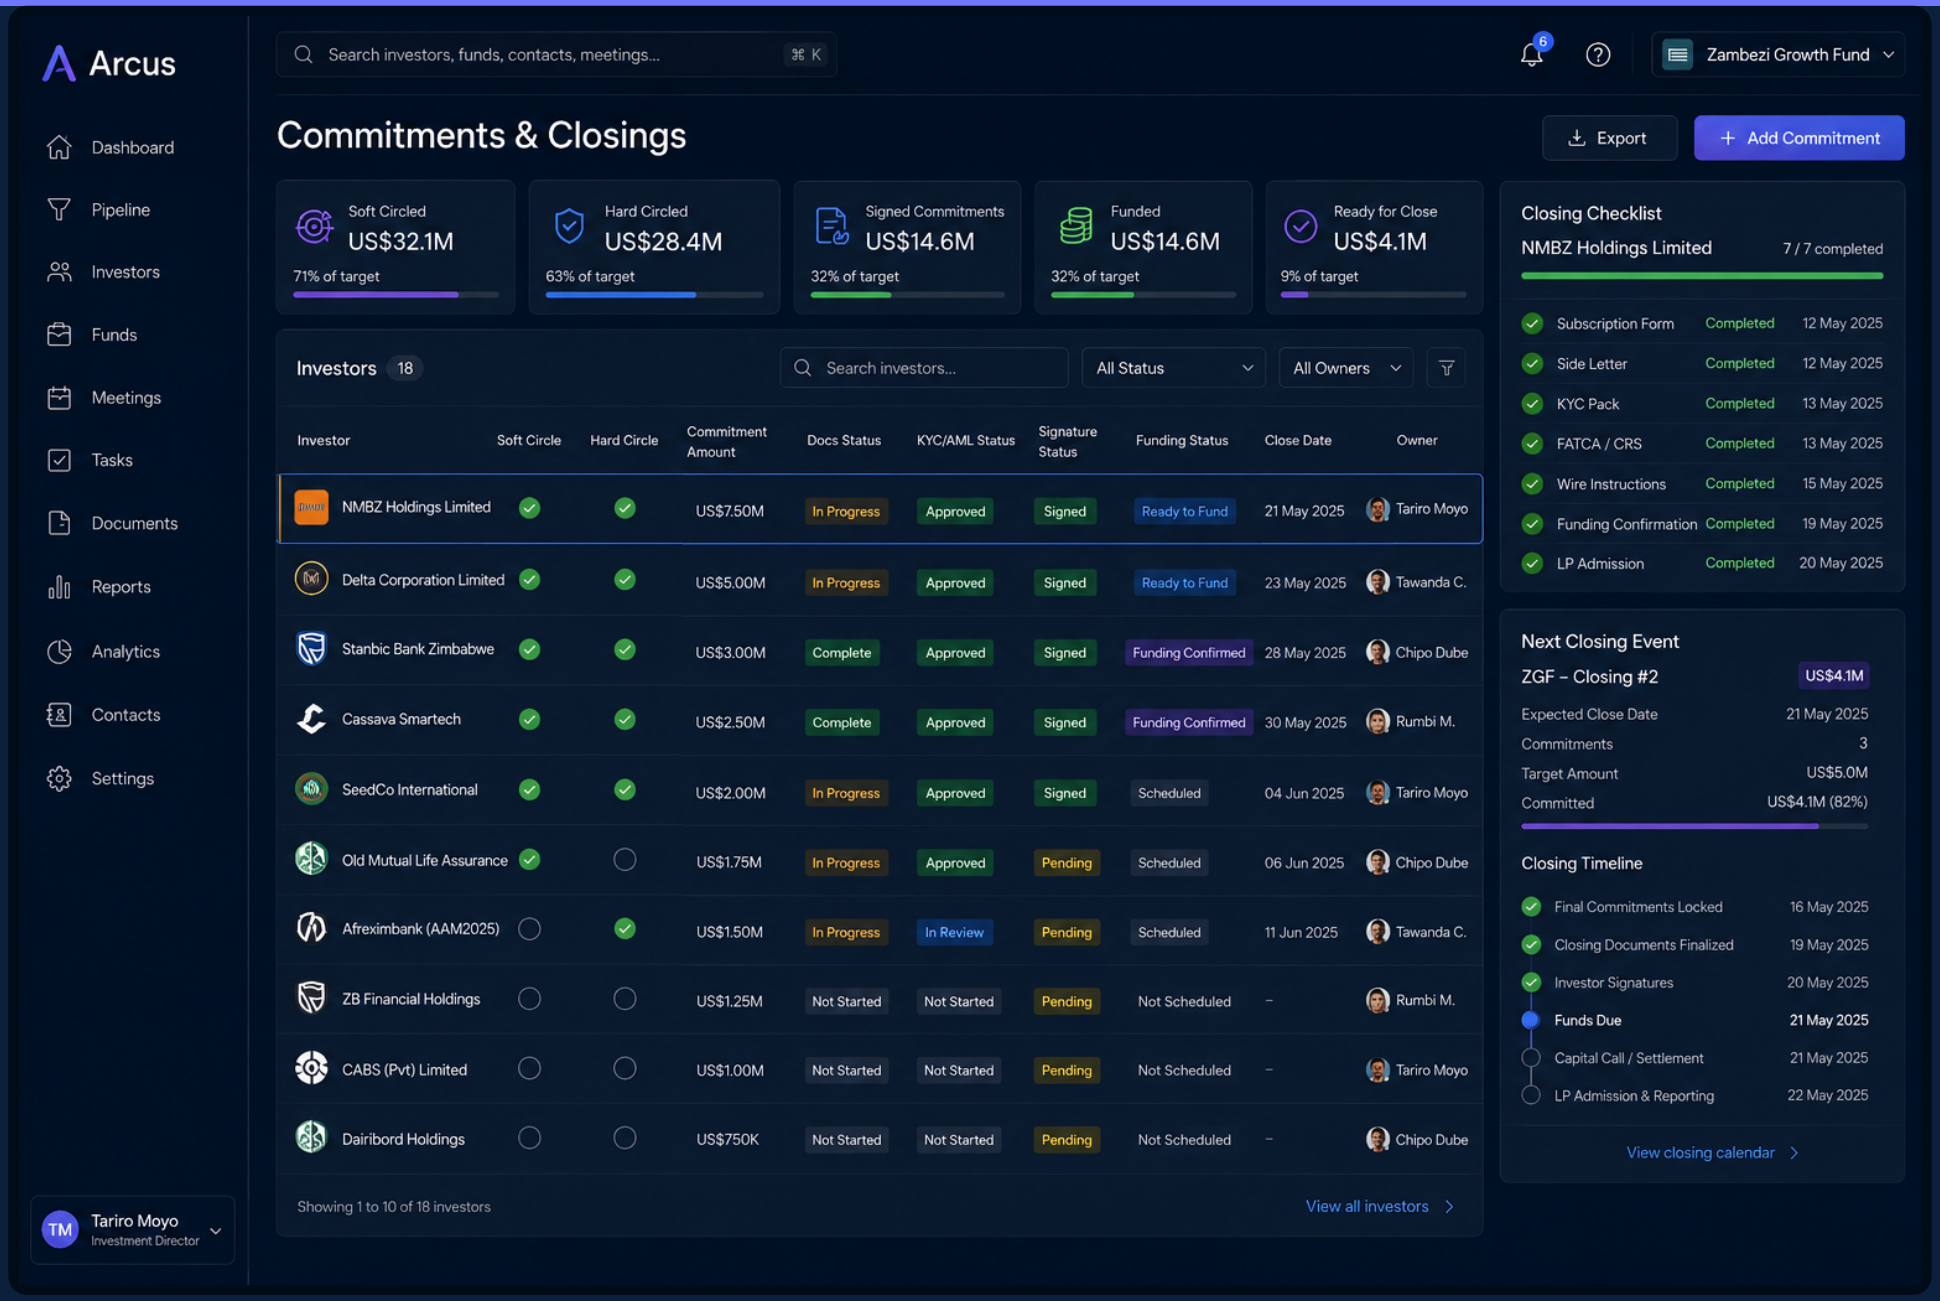

A.5 Due-Diligence Workspace

Investor due-diligence status, document matrix, Q&A requests and recent discussions.

DDQ ownership, document status and investor follow-up.

A.6 Commitments and Closings

Investor commitment register, KYC, signature, funding status, closing checklist and timeline.

PE/VC closing readiness and admission control.

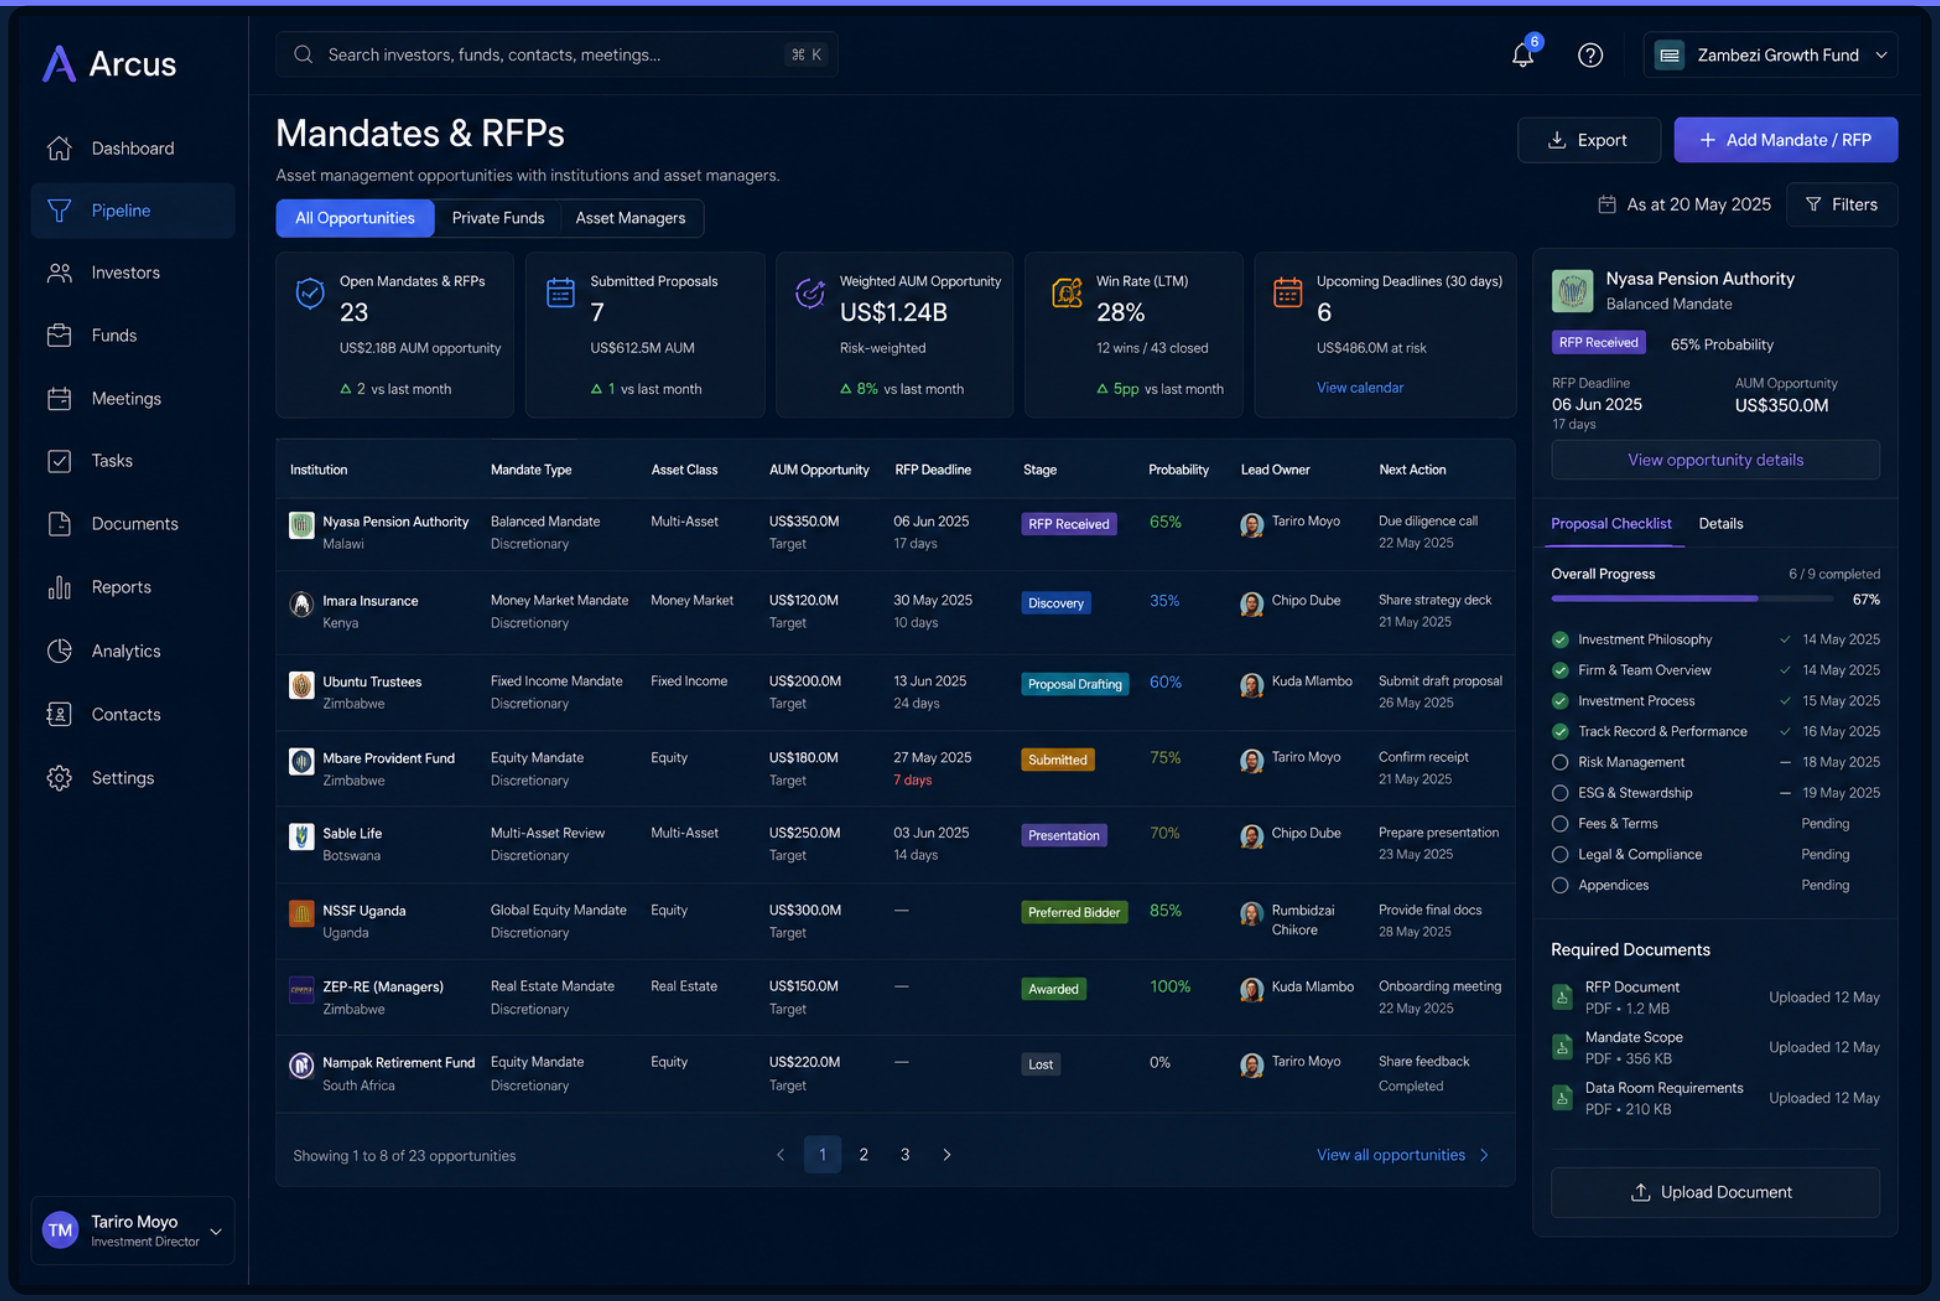

A.7 Fundraising Analytics

Funnel conversion, capital raised, source and geography, ageing, owner performance and readiness.

Management forecasting, conversion and concentration reporting.

A.8 Asset-Management Mandates and RFPs

Mandate and RFP pipeline with AUM opportunity, deadline, stage, owner, checklist and documents.

Institutional mandate origination and tender management.
