For Arcus, do **not** force all regulatory reports to use `fundId` only. Build the reporting engine with a **flexible scope model**, because some reports are naturally **firm-wide**, while others are naturally **fund/scheme-specific**.

Recommended system design

Use this instead of only `fundId`:

report_scope_type:

- FIRM

- FUND

- CIS_SCHEME

- CLIENT_MANDATE

- PORTFOLIO

- INVESTOR

- TRANSACTION

- REGULATOR_PACK

scope_id:

- nullable if firm-wide

- fundId if fund-scoped

- schemeId if CIS-scoped

- clientMandateId if mandate-scoped

- portfolioId if portfolio-scoped

That gives developers flexibility. A report can be generated for one fund, one CIS scheme, one client mandate, or the whole firm.

---

1. AML Reports

Recommended scope: Firm-wide by default, with fund/client drill-downs

AML is usually about the **licensed institution's compliance risk**, not just one fund. The regulator or FIU wants to know whether the firm is identifying clients properly, monitoring suspicious transactions, screening sanctions/PEPs, keeping records and reporting suspicious activity.

For a VC or PE fund, AML focuses on:

- LPs / investors subscribing into the fund.
- Source of funds.
- Beneficial owners.
- Capital call payments.
- Distributions.
- Suspicious investor behaviour.
- High-risk jurisdictions.

For an asset manager, AML focuses on:

- Clients.
- Mandates.
- Deposits and withdrawals.
- Unusual trading or cash movements.
- Third-party payments.
- Sanctions and PEP screening.

So the system should generate the main AML report as:

scope_type = FIRM

scope_id = null

But inside the report, include sections by:

fundId

clientMandateId

investorId

transactionId

riskRating

Practical example

If a firm manages 5 funds, the AML officer should not need to submit 5 separate AML compliance reports unless specifically required. The system should produce one AML pack showing the whole firm's AML position, then break it down by fund/client where necessary.

---

2. SECZIM Reports

Recommended scope: Depends on the report type

SECZIM reporting can be either:

1. **Firm-wide**, where the report is about the licensed asset management company itself.
2. **Fund/scheme-specific**, where the report is about a particular managed fund, CIS, portfolio or mandate.

So do not hardcode SECZIM reports as only `fundId`.

Use:

scope_type = FIRM

for reports about the licensed entity, such as:

- Licence compliance.
- Capital adequacy.
- Fit and proper confirmations.
- Firm-level assets under management summary.
- Firm-level risk/compliance declarations.
- Firm-level regulatory returns.

Use:

scope_type = FUND

or:

scope_type = CIS_SCHEME

for reports about a specific fund or scheme, such as:

- Fund valuation.
- Fund holdings.
- Fund cash balances.
- Fund investor/unit-holder movement.
- Fund income and expenses.
- Fund-level performance.
- Fund-level risk exposure.

Practical example

If SECZIM asks, “What is the position of ABC Asset Management as a licensed firm?” that is firm-wide.

If SECZIM asks, “What is the position of ABC Money Market Fund?” that is fund/scheme-scoped.

---

3. CIS Reports

Recommended scope: CIS scheme/fund-scoped

A Collective Investment Scheme is a specific pooled investment product. Think of it like a basket where many investors put money together, and the manager invests that pooled money.

A CIS report should normally be generated per registered scheme/fund because each scheme has its own:

- Assets.
- Liabilities.
- NAV.

- Unit holders.
- Trustee/custodian.
- Fees.
- Investment limits.
- Income.
- Distributions.
- Portfolio holdings.

So for CIS reports, use:

scope_type = CIS_SCHEME

scope_id = schemeId

or, if your system treats each CIS as a fund:

scope_type = FUND

scope_id = fundId

Practical example

If the firm manages:

- Money Market Fund
- Equity Fund
- Balanced Fund

Each one should have its own CIS report. The firm can also generate a **combined CIS summary**, but the underlying reports should remain scheme/fund-specific.

---

4. Trustee Quarterly Reports

Recommended scope: Fund/CIS scheme-scoped

A trustee's role is usually to oversee or safeguard the assets of a specific fund or scheme. The trustee quarterly report is therefore normally about whether a particular fund/scheme is being operated properly.

It should include things like:

- Fund assets.
- Custody position.
- Bank balances.
- Investments held.
- Valuation date.
- Compliance with investment mandate.
- Trustee confirmations.
- Exceptions or breaches.
- Reconciliations.
- Supporting schedules.

So use:

scope_type = CIS_SCHEME

scope_id = schemeId

or:

scope_type = FUND

scope_id = fundId

Do not make trustee quarterly reporting firm-wide as the default, because combining all funds into one trustee report can hide issues in one specific fund.

---

5. Best Answer for Developers

Build the regulatory report generator like this:

AML Report:

Default scope = FIRM

Optional drill-down = fundId, clientMandateId, investorId, transactionId

SECZIM Report:

Default scope = depends on report template

Firm compliance report = FIRM

Fund return / portfolio return = FUND or CIS_SCHEME

CIS Report:

Default scope = CIS_SCHEME or FUND

Trustee Quarterly Report:

Default scope = CIS_SCHEME or FUND

---

6. Simple Rule of Thumb

Use this rule:

Report Type	Default Scope	Why
AML Compliance Report	Firm-wide	AML is about the whole reporting institution's client and transaction risk
AML Suspicious Transaction Case	Transaction/client/fund-linked	The suspicious activity must be traceable to the exact client, fund or transaction

SECZIM Firm Compliance Report	Firm-wide	It relates to the licensed asset manager/company
SECZIM Fund Return	Fund-scoped	It relates to a specific managed fund or portfolio
CIS Report	Fund/scheme-scoped	Each CIS is a separate regulated pooled product
Trustee Quarterly Report	Fund/scheme-scoped	The trustee usually reports on a specific scheme/fund’s assets and compliance

---

7. Final Recommendation

For Arcus, the safest design is:

Do not make regulatory reporting only fundId-based.

Use a flexible report scope engine.

The system should support both:

Firm-wide regulatory packs

and:

Fund / CIS / mandate-specific reports

For the reports you named:

AML = firm-wide by default

SECZIM = firm-wide or fund-scoped depending on template

CIS = fund/scheme-scoped

Trustee Quarterly = fund/scheme-scoped

This gives VC funds, PE funds and asset managers in Zimbabwe a proper regulatory reporting structure without forcing all reports into the wrong scope.
